

Pinyon Pine - Utah Juniper / Blue Grama Woodland (11)

Location: This type occupies large areas throughout the mapping area. It occurs east of the Monument access road, north of the canyon, and south of the canyon on a basalt covered slope of Anderson Mesa.

Photosignature: The older stands (mostly south of the canyon) have an evenly pebbly texture resulting from the even spacing of tree crowns. North of the canyon in the disturbed area the trees are in mixed aged stands with an uneven pebbly appearance. In both cases the tree crowns are grayish brown tinged with red.
